

# SPORTS FENCING & MARQUEES

The Liniar Sports Fencing system is ideal for sporting events which need a boundary creating. We supply our uPVC fencing system to various Cricket, Football and Rugby clubs.

Made in our Derbyshire factory from lead free window grade uPVC, Liniar offer a versatile range of fencing styles, which can be supplied in bar lengths or in pre-fabricated panels, and for permanent or temporary installation.

The fencing is easy to construct, will not rot or warp and requires no maintenance other than the occasional clean.

Marquee supplied and installed by Crocker Brothers.

Marquee supplied and installed by Crocker Brothers.

Crocker's have developed a solid marquee wall system which utilises both the Liniar uPVC profile and Crocker's bespoke aluminium profile to create a robust and durable construction.

The walls can be fitted to most makes of aluminium frames and offer higher levels of thermal and acoustic insulation to that of the standard soft panels found on most marquees.

They are ideal for long term hire or permanent installations and are available in white, green or brown. For further information, please contact a member of the sales team on the numbers below.

# EVENT FENCING

The Liniar Event Fencing system is ideal for any occasion where a decorative, free standing temporary fencing system is required. They've been used around Christmas trees in town centres, at concerts, at musical festivals, at local shows and exhibitions.

Photo courtesy of Commercial Marquee Hire Limited

'Event' fencing from Liniar is made in our Derbyshire factory using lead-free window grade durable uPVC. Incorporating a unique mounting system, again in uPVC, the system is quick and easy to erect.

The panels are supplied pre-fabricated in 2m x 1m high panels, with bespoke sizes also available and can be purchased or hired.

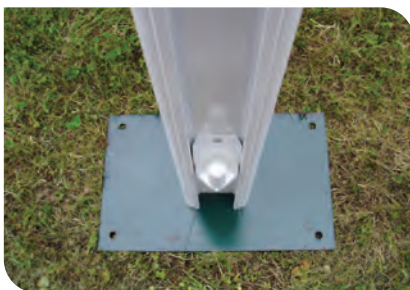

Panels hook onto post brackets for quick and easy assembly.

Bracket assembly allows panels to pivot; creating angles or corners without the need for an intermediate post.

Choice of four styles of picket tops.

Posts slot onto a green steel base plate for stability. Base plates have pre-drilled holes to allow for extra staking into soft ground.

Stringer rails are reinforced with steel for additional strength and durability.

Domed screw caps hide unsightly screw heads and add a feature to the stringer rails.
