

Our Georgian bars

are a *snap* to use!

External and internal Georgian bars that snap in place, giving a more authentic look than 'in-unit' alternatives.

- Reduce production time
- Fast, efficient installation on site if required.
- An easy up-sell to consumers, and a good way to get ahead in the new build market.
- Dedicated cruciform mouldings enable you to square cut the bars and simply snap into place.
- Available in woodgrain finishes as well as white.

Snap-on Georgian Bars

Simple to install

Units can have bars applied to either one or both sides of the window as required and the bars will flex with the unit – so that if “toe and heeling” is required this will not impact on the effectiveness of the bars. If, however, reglazing is required, then the bars can be easily removed and reapplied on site.

- The components comprise edge clips, centre clips, end & cruciform caps and the Georgian Bars.
- The Geo Fast clips have a world-wide patent.
- Place the edge clips in the required positions around the sealed glazing units.
- Glaze window as normal, ensuring that clips have retained their position prior to final beading.
- Using an alcohol wipe ensure that all surfaces are clean, dry and free of grease.
- Accurately align the centre clip to the edge clips, place a 40mm length of double sided tape to the underside of the centre clip and fix in place.
- Precisely cut a full length bar and apply end caps. This should always be the shortest span for maximum rigidity.
- Cut remaining bars and apply end caps and cruciform covers and snap into place to complete the installation.
