

New sculptured balustrade system:

A contemporary design that's simple to fit

Liniar is delighted to announce the completion of its sculptured balustrade system with the introduction of the new twin-walled 125mm sculptured post, cap and picket – all now in stock.

Why choose the Liniar sculptured balustrade system?

- Full system - matches existing sculptured handrails to give a sleek finish and contemporary design
- Latest engineering techniques result in a robust product that enhances overall appearance
- Sculptured system allows both square and diamond picket formation and compatible with glass pickets which are available ex-stock
- Sculptured post only requires 150mm length of steel reinforcement*
- Available in a range of colours including plain white, cream, beige also forest green, golden oak, and grey foiled, all ex stock with special foils available made to order
- Full range now in stock!

*Steel reinforcement also now available in this length

New sculptured balustrade system:

A contemporary design that's simple to fit

Step 1

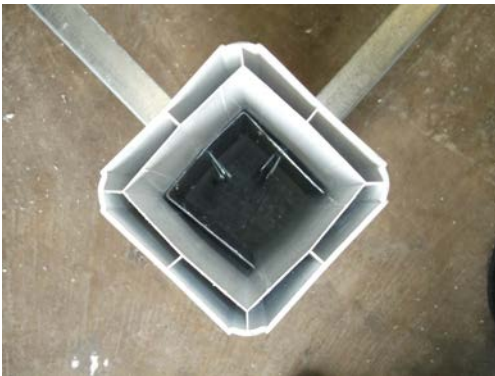

Put one fixing through the post to allow positioning of a 150mm length of steel reinforcement.

Step 2

Drop the reinforcement into the post so it lodges onto the single fixing.

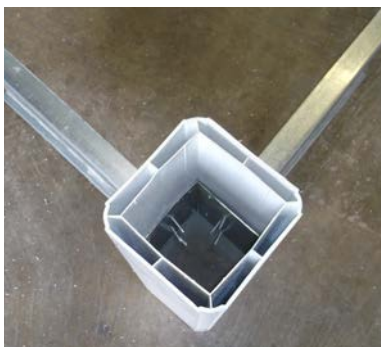

Step 3

Put the remaining fixings through the steel and into the sub-frame in the usual way.

Step 4

Put balustrade fixings straight through the twin-walled post - no reinforcement necessary
